Summary

Senior Full Stack Engineer with 7+ years of experience building scalable backend systems, microservices, and cloud-native applications. Skilled in Go, Node.js, AWS, distributed systems, secure API design, Docker, CI/CD, and serverless architectures. Experienced in AI-assisted development using Cursor, Claude Code, and GitHub Copilot, with a strong background in performance optimization, payments integration, and remote team collaboration.

Professional Experience

Tawk.to - Full Stack Engineer

March 2022 - Present, Remote

- Improved application performance by 20% through memory leak audits and proactive debugging.
- Led Stripe subscription integration, enabling recurring revenue flows and reducing friction in cancellations.
- Drove code quality across a 7-engineer Agile team via code reviews and modular architecture decisions.

Ahsay - Hybrid Mobile App Developer

Sep 2021 - Feb 2022, Remote

- Delivered new features and bug fixes for a production horse racing mobile app, improving stability and release velocity.
- Collaborated within a 6-person team to ship iterative updates under tight timelines.
- Reduced recurring issues through targeted debugging and patch releases.

Corebridge - Full Stack Engineer

Jan 2021 - Dec 2021, Remote

- Owned end-to-end delivery of Angular CRM features, including API integrations and secure JWT authentication.
- Delivered 1–2 production features monthly, coordinating cross-team dependencies for larger initiatives.
- Improved system clarity by documenting workflows with UML, reducing onboarding friction for new devs.

Upwork - Full Stack Engineer

Jan 2020 - Dec 2020, Remote

- Built and deployed ride-hailing admin platform (Go Taxi 20) using Angular and Firebase.
- Implemented real-time database + storage systems for a TikTok-style app using Firebase.
- Delivered multiple client projects end-to-end, maintaining 100% remote delivery.

ProximaX Enterprise - Full Stack Engineer

Oct 2018 – Jan 2020, Cambodia

- Contributed to PayLuy Wallet ecosystem, supporting a product with 100K+ downloads.
- Developed Node.js SDKs and automated signing services, improving transaction processing reliability.
- Solved blockchain transaction challenges using design patterns, increasing system maintainability.

Dragonfly Fintech - Full Stack Engineer Intern

Jun 2018 – Sep 2018, Cambodia

- Built OTP microservice (Node.js) for secure authentication workflows.
- Eliminated SMS spam issue by implementing rate limiting, reducing abuse incidents.
- Contributed to Ionic-based mobile wallet UI development.

Projects

Inspector Toolbelt - Home Inspection App

- Built core backend features including JWT authentication, user onboarding, and transaction-based account balances.
- Designed secure APIs for transactional workflows and user sessions using Express.
- Deployed containerized application via Docker on AWS Lambda and GCP Cloud Run, improving portability and reliability.
- Collaborated in a 3-person team, delivering production-ready features end-to-end.
- Tech Stack: TypeScript, Express, MongoDB, Docker, DigitalOcean

MeowPass - CLI-First Secret Management

- Built an end-to-end encrypted secret management platform with Go CLI, AWS Lambda API, and Next.js web app using AES-256-GCM and Argon2id encryption.
- Built a zero-knowledge security model with on-device encryption, OS keychain storage, WASM-based browser decryption, and X25519 key exchange for secure vault sharing.
- Developed 14+ integrations including MCP server support (Claude, Cursor, Windsurf), GitHub Actions, Chrome extension, and Node.js SDK with native E2E encryption.
- Implemented team collaboration and security features including RBAC, vault sharing, secret expiry, version history, rollback, and key rotation.
- Engineered SaaS infrastructure with device-flow authentication, Dodo payments, GoReleaser binaries, Homebrew distribution, and monorepo orchestration.
- Tech Stack: Go, TypeScript, Next.js, Node.js, AWS Lambda, Neon PostgreSQL, Docker, MCP

ResQ - AI CV Optimizer

- Built an AI-powered resume optimizer with real-time ATS scoring and resume-to-job-description keyword analysis.
- Engineered an AI rewrite system that generates quantified bullet points and integrates job-specific keywords through a mock API pipeline.
- Implemented keyword highlighting with one-click insertion for missing or matched skills directly in the editor.
- Designed a side-by-side diff viewer with animated change highlighting using Framer Motion.
- Developed a Notion-style resume editor with section-based editing and PDF/DOCX export support.
- Tech Stack: Next.js 16, TypeScript, Tailwind CSS v4, shadcn/ui, Zustand, React Hook Form, Framer Motion

Zestie - Multi-App Lifestyle & Deals Ecosystem

- Built full-stack ATS resume optimizer that parses user-uploaded PDF resumes, scores keyword alignment against job descriptions, and delivers an optimized resume PDF — end-to-end in under 60 seconds
- Designed async job processing pipeline with queued/processing/completed/failed lifecycle, enabling non-blocking resume analysis with real-time status polling on the results page
- Implemented email-gated download flow and guest abuse controls (one free optimization per session) to drive email capture conversion before unlocking optimized PDF
- Enforced privacy-first data retention: source files auto-deleted after 24 hours, with minimal metadata retained for analytics and abuse prevention
- Tech stack: Go (backend), TanStack Start (React SSR frontend), TypeScript, PostgreSQL, PDF generation/parsing, OpenAPI, pnpm monorepo, Docker

Statlingo

- Led development of the real-time alert system with auto-escalation, acknowledgment tracking, and response times under 8s.
- Implemented Multilingual translation with speech-to-text, neural TTS, and verified medical phrases (20+ languages).
- Designed role-based UX for staff and patients, improving usability across scenarios.
- Built scalable architecture using MVVM and dependency injection (Hilt).
- Tech Stack: Next.js 16, Kotlin, Jetpack Compose, TypeScript, Tailwind CSS v4, ML Kit, Framer Motion, Netlify

Payluy Wallet

- Delivered core wallet features including authentication, transfers, and offline transaction history.
- Contributed to scaling a production app with 100K+ downloads on Google Play.
- Improved reliability in low-connectivity environments via offline-first design.
- Collaborated within a 15-member cross-functional team (dev, QA, lead).
- Tech Stack: Angular, NestJS, Firebase, Docker, Blockchain

ProximaX Wallet V1

- Implemented OTP verification system across email and phone within 1 month.
- Delivered crypto transfer functionality in 2 weeks, enabling core wallet operations.
- Supported full deployment to Google Play and App Store in 4 weeks.
- Contributed to a 10-person team delivering production-ready blockchain features.
- Tech Stack: Angular, Node.js, Sails.js, Firebase

ProximaX Wallet OTP Server

- Built OTP microservice with SMS provider failover (MessageBird, Nexmo) for reliability.
- Reduced abuse by implementing rate limiting and request throttling.
- Deployed containerized service on AWS EC2, improving scalability.
- Ensured high availability for authentication workflows.
- Tech Stack: Sails.js, AWS EC2, Docker

ProximaX Forensics

- Developed Ionic-based mobile UI from scratch, accelerating product delivery.
- Implemented data persistence with MongoDB for forensic records.
- Collaborated within a 10-person team on early-stage product features.
- Improved UI consistency across application modules.
- Tech Stack: Angular, MongoDB, Ionic

Meco PH

- Built mobile app from design mockups to production-ready Ionic application.
- Delivered deployment assets and supported Google Play release (1K+ downloads).
- Collaborated in a 4-person agile team to meet tight deadlines.
- Improved UI responsiveness across devices.
- Tech Stack: Angular, Ionic, TypeScript

EON Travel App

- Developed booking and payment dashboard from scratch.
- Delivered full mobile app from mockups to Google Play release (1K+ downloads).
- Integrated Firebase for backend services and real-time data.
- Collaborated in a 4-person product team.
- Tech Stack: Angular, Firebase, Ionic

The Heineken Draught Challenge

- Built and shipped mobile app in 2 weeks, demonstrating rapid delivery.
- Prepared and delivered store-ready assets within 2 days.
- Released app to Google Play (1K+ downloads).
- Collaborated in a small agile team (4 members).
- Tech Stack: Angular, Firebase, Ionic

Education

Bachelor of Science in Information Technology

Kabankalan Catholic College • Negros Occidental, Philippines • 2019

Technical Skills

- **Frontend:** Next.js, React, Angular (v2–19), TypeScript, HTML5, CSS3/Sass, Tailwind CSS, PostCSS, ESLint, Figma-to-Code
- **Backend & APIs:** Node.js, NestJS, RESTful API Design, JWT Authentication, Role-Based Access Control (RBAC)
- **Mobile Development:** Kotlin (Jetpack Compose, Android SDK, Room, TTS, Speech Recognition, MVVM, Hilt), Ionic (v3–8), Google Maps API, App Store & Play Store Deployment
- **Databases & Data:** MongoDB, PostgreSQL, Firebase (Firestore), SQL, JSON, YAML
- **DevOps & Cloud:** Docker, CI/CD (GitLab, Jenkins), AWS (EC2, S3), Google Cloud Platform, Firebase, DigitalOcean, Serverless Architectures
- **Testing & Quality:** Jasmine, Karma, Unit & Integration Testing, Test-Driven Development (TDD), Debugging & Performance Optimization
- **Tools & Practices:** Git (PR workflows, code reviews), Swagger, Agile/Scrum, UML (Sequence, Activity Diagrams), Design Patterns, JIRA, Confluence

Availability

Fully remote (Philippine and Australian Time Zones)
